McGlasham.Cameron@outlook.com

Motivated and adaptable professional with a strong background in community engagement, digital project delivery, and direct support work. Experienced across corporate, charitable, and frontline roles, I bring a unique blend of technical literacy, safeguarding awareness, and interpersonal skills. Proven ability to manage multiple projects, coordinate volunteers, and deliver inclusive support to diverse groups, including vulnerable young people and individuals with disabilities. Skilled in mentoring, report writing, and problem-solving with a hands-on approach. My educational background in Software Engineering and Technology Project Management complements my field experience, making me confident in bridging technical solutions with real community impact. Committed to fostering empowerment, confidence, and long-term wellbeing in the communities I serve.

Skills

- Project Management: Agile Methodologies, Risk Analysis, Planning and Design
- Software Development: UX/UI design (Figma) Mobile App Development, Web and Desktop Solutions, Cross Platform Applications
- Technical Skills: Kotlin, Flutter/Dart, Swift, Java, JavaScript, HTML, CSS, Python, R, Predictive Data Modelling
- Tools: Microsoft Office, GitHub, Rally, Panaya, Figma, Oracle E-business suite
- Soft Skills: Public Speaking, Team Collaboration, Problem-Solving, Time Management
- Time Management
- Highly adaptable and fast learner
- Digital & Technical Literacy
- Adaptability & Problem Solving
- Mentoring & Coaching

Experience

08/2024 – PRESENT

Digital Technology Intern / Baker Hughes, Nailsea

So far during my internship I have worked on a range of projects. Including the large scale upgrade of and ERP software, the design and development of a new system to centralise a document review process, and the development of a new warehouse management software for a logistics base overseas.

On top of that, I volunteered myself to join a team to carry out an upgrade on the onsite OT (operational technologies) network, because of my experience and confidence with networking equipment I quickly became the onsite lead for this project working with a network architect from overseas.

My overall direction of my internship has been towards project management and product ownership, overseeing planning and executing user acceptance testing (UAT) for large scale enterprise applications. One of the challenges that I have overcome with this role so far is managing workloads of multiple projects at the same

Short-List Responsibilities

- Planning and execution of digital technology projects.
- Collaborating with various areas of the business to improve processes and systems.
- Managing my time between projects

time, which was possible by prioritising tasks and keeping detailed lists of activities that are done and to be done.

effectively to meet deadlines.

03/2022 – 09/2022

Assistant Hub Coordinator / Transitions UK, Bedfordshire

At Transitions, I planned and led weekly sessions for young people, including activity coordination, meal planning, safeguarding, volunteer recruitment and management, and outreach to local organisations. I conducted initial assessments, maintained contact logs, audited records, and built strong relationships with beneficiaries. Sessions combined group meals with social and skill-building activities to boost confidence and self-esteem. I also supported summer events like zoo trips and laser tag. Later, I worked on Attain and Aspire—projects for care leavers and at-risk youth—where I coordinated mentoring support, tracked progress, and adapted to more complex challenges. I received training in Safeguarding, First Aid, Prevent, and Learning Needs.

Short-List Responsibilities

- Planned and facilitated weekly sessions combining activities, meals, and social engagement
- Managed and supported volunteers, including recruitment and training
- Conducted assessments and maintained accurate records and contact logs
- Engaged local organisations for workshops and community partnerships
- Built trusted relationships with young people to support personal development
- Delivered seasonal events and trips to boost engagement
- Supported care leavers and at-risk youth through mentoring programmes
- Maintained data systems and completed safeguarding and first aid training

10/2022 – 05/2023

Support Worker / Families United Network, Bedfordshire

Working at F.U.N as a support worker on the Junior Respite Club, ages 4 to 11 and sometimes the Senior Respite Club, ages 9 to 18, we offer a safe and fun environment for children with special needs and disabilities to come and enjoy the activity center. My main responsibilities are to write a report for the parents and carers about their child's activity in the session, to know of any issues the children I support might be facing, how to communicate and support their needs and most importantly be alert for any safeguarding concerns. I also worked at the Adult Club working with adults with special needs where my main focus has been to be a friend and help boost people's confidence. We covered many themes, including independent skills and communication to basic IT training and job searching

Short-List Responsibilities

- Supported children and adults with special needs in safe, engaging activity sessions
- Wrote session reports for parents and carers outlining participant progress
- Provided tailored support based on individual needs and communication styles
- Monitored and reported safeguarding concerns
- Encouraged social interaction and built confidence through inclusive activities
- Delivered sessions on life skills, communication, basic IT, and job searching

08/2017 – 08/2020

Field Operative / Ericsson, East Anglia+

During my three years at Ericsson, I was deeply involved in telecommunications infrastructure work. My responsibilities included technical fault finding on various networks, managing and prioritising workloads, and emergency troubleshooting. I handled preventative maintenance, communicated with site owners, and

Short-List Responsibilities

- Spares Management
- Maintenance of: 2G,3G,4G,5G technologies, Power

managed access systems. When systems failed, I was dispatched to diagnose and fix issues under significant time pressure. I developed strong communication skills, connecting with fellow engineers, back-office support, site owners, and spares management centres. My role required regular collaboration with engineers for specialised solutions. I meticulously documented every modification, tracked equipment performance, and maintained detailed service records, balancing on-site physical work with technical reporting. The role demanded constant learning as technology evolved, serious problem-solving skills for unexpected field issues, and the ability to maintain composure under pressure with critical infrastructure.

Supply Units, ground safety, heights safety, equipment

conditions •

- Effective notes on tickets to accurately log activities.
- Vehicle Maintenance
- Effective teamwork and collaboration.

Education

08 / 2024

Distinction MSc Technology Project Management / Cardiff Metropolitan University

Over the course of my studies, I engaged in a range of modules, the degree itself has a range of computer science modules, project management modules and business modules. The modules I enjoyed the most and that I found most engaging were End User Computing Risk Management which heavily focused on the risks and consequences of not completing the legal due diligence when working with fin-tech software's and excel. Secondly, Social Media Analytics for Business was intriguing as I was introduced to the software's and techniques vast amounts of data is scraped from the web for analysis to gain insight into trends and interests.

Finally, although it was tough, my technology dissertation was by far my favourite, being about to conduct my own research into something I deemed important was truly a different experience to the rest of my studies. My aim was to compare the differences between native and hybrid programming languages for mobile devices. I developed three identical mobile applications, one for an android phone, one for an iPhone and one that could be installed on both. The application was designed to stress test various hardware's and experience of the devices and gather data against them. It was a great experiment and my results were definitive and interesting and my grade heavily reflected the work I put in.

07 / 2023

BSc Hons Software Engineering / Bedfordshire University

My time at university was a great experience and I learnt a range of new skills thorough my modules and can truthfully say I made the most of it. Databases and computer networks was an interesting module, where I learnt how to design and configure relational databases and picked up methods of communicating through networks using command line interfaces to create and modify databases using SQL. Secondly, in my final year I studies a module called Agile Project Management where I learnt more theoretical areas of project management and how it can heavily influence the result of a product. It also is something I felt I could vital importance to my skill set and what encouraged me to pursue my masters in PM.

Finally, my favourite module during my undergrad was Mobile Application Development, it was something I found fun and interesting and holds significance in the future of all our lives. Statistically, every year more of worlds internet traffic is moving away from desktop computers and laptops and through our mobile devices. I went on to create a mobile application for my undergraduate project that teaches the basics of British Sign Language and graduating with a First.
